# Github Repository

## Windows

- Click on File and then Clone Repository tab or press Ctrl + Shift + O to open the cloning screen
- Copy and paste the following URL: <https://github.com/abdulkadirdere/group8project.git>
- Select a local path directory if necessary
- Click on Clone button.
- This will clone the repository to your local workspace
- You can open the Windows CMD/Git Bash on this directory and type "git status" to determine if the git repository is initialised

## Linux

- Open the Terminal
- Create or navigate to the directory in which you want to clone the repository
- Type the following in the terminal: `git clone https://github.com/abdulkadirdere/group8project.git`
- Enter your username and password for GitHub account (if required)
- This will clone the repository to your local workspace
- You can type "git status" in the terminal while in this directory to check the status of your local copy.
